

Adding More IsoTRAX

Note: Please review and have a good understanding of the Basic Installation instructions before reading these instructions. These instructions serve as a guide. The responsibility for recognizing and compensating for field conditions is with the installer.

The isoTRAX™ Sound Isolation System was designed to add additional TRAX elements with ease. Simply overlap end sections and attach with provided hardware. The end sections of the TRAX will share an isoTRAX™ Pad. See the diagram below.

To complete the installation follow step 3 and 4 of the Basic Installation instructions.
