PRODUCT DATA SHEET

Soft Sound® Class A Bass Wedge Studio Foam

Features & Benefits:

- **Engineered for performance** - Soft Sound® Class A Bass Wedge is a thick acoustic foam product with a deep v-cut pattern that traps hard to control bass frequencies. This style of product was originally created for anechoic testing chambers. Class A Bass Wedge has a Noise Reduction Coefficient (NRC) equal to the polyurethane Bass Wedge products.
- **Quality -** Soft Sound® Class A Bass Wedge Studio Foams are made with the highest quality melamine foam. The foam is consistent in density and firmness so acoustic performance will also be consistent.
- **Flammability** - Soft Sound® Class A Bass Wedge Studio Foams are manufactured from melamine foam that has a Class A flammability rating. This product passes most building code flammability requirements for exposed materials.

General Information:

Soft Sound® Class A Bass Wedge was originally designed to reduce low frequency reverberation within recording studio and anechoic chamber environments, however, it will improve the acoustics within any space that suffers from poor low frequency control. Choose this studio foam product for applications or buildings that require a Class A rating for exposed materials. Class A products should be used over polyurethane foams where large numbers of people congregate. Class A Bass Wedge is a wall mounted sound absorbing panel and has a bold linear pattern that adds architectural interest. This professional grade studio foam product enhances sound quality of any recording or listening environment.

Applications:

Anechoic Chambers • Broadcast Studios • Product Testing Environments • Professional and Home Recording Studios • Professional and Home Theaters

Acoustic Data:

frequency	125	250	500	1K	2K	4K	NRC*
6 inch	.22	1.07	1.27	1.34	1.27	1.15	**1.25**
8 inch	.39	1.05	1.44	1.38	1.33	1.19	**1.30**

***** NRC = noise reduction coefficient
